*sti/min is the abbreviation for "stitches per minute"

JUKI ECO PRODUCTS	The PLC-2700 Series is an eco-friendly product which complies with JUKI ECO PRODUCTS standards for protecting the environment.
	<ul style="list-style-type: none"> The sewing machine complies with the "Juki Group Green Procurement Guidelines" on the use of hazardous substances, which is stricter than other restrictions, such as those of the RoHS Directive. For details of JUKI ECO PRODUCTS, refer to: https://www.juki.co.jp/en/company/eco *The RoHS Directive is an EU Directive limiting the use of 6 hazardous substances (lead, hexavalent chromium, mercury, cadmium, PBB and PBDE) in electrical and electronic equipment. The Juki Green Procurement Guideline is the voluntarily established criteria to eliminate not only the aforementioned six substances, but also other ones which also adversely affect the environment.

Registered Organization: JUKI CORPORATION Head Office
The Scope of the Registration: The activities of research, development, design, sales, distribution, and maintenance services of industrial sewing machines, household sewing machines and industrial robots, etc., including sales and maintenance services of data entry systems.

MARCH, 2023 Printed in Japan(TN)

JUKI

PLC-2700 Series

Post-bed, Unison-feed, Lockstitch Machine with Vertical-axis Hook

It is the most-advanced sewing machine which is best-suited to the sewing of heavy weight materials sewing processes such as car-seats, sofas and sports goods.

PLC-2710S-7-0BB/CP-180C

PLC-2760SDA-7-0BB/CP-180C

1-needle type

- PLC-2710S (Large hook without automatic thread trimmer)
- PLC-2710NS (Large hook without automatic thread trimmer)
- PLC-2710NM (Small hook without automatic thread trimmer)
- PLC-2710S-7 (Large hook with automatic thread trimmer)
- PLC-2710NS-7 (Large hook with automatic thread trimmer)
- PLC-2710NM-7 (Small hook with automatic thread trimmer)

2-needle type

- PLC-2760S (Large hook without automatic thread trimmer)
- PLC-2760NS (Large hook without automatic thread trimmer)
- PLC-2760NM (Small hook without automatic thread trimmer)
- PLC-2760S-7 (Large hook with automatic thread trimmer)
- PLC-2760NS-7 (Large hook with automatic thread trimmer)
- PLC-2760NM-7 (Small hook with automatic thread trimmer)
- PLC-2760L (Large hook/Thick-thread type)
- PLC-2765 (Large hook/Organized split needlebars type)

Post-bed, Unison-feed, Lockstitch Machine with Vertical-axis Hook

PLC-2700 Series

Most-advanced machine best suited to the stitching for heavy weight materials.

The long distance from the machine arm to the needle contributes to improved workability

PLC-2760SDA-7-0BB/CP-180C

Stitches with authentic quality

(All PLC-2700 Series has achieved the max stitch length of 12mm.)

3D stitch
for car seat of head rest, arm rest, etc.

* The machine is using the guide presser foot.

Topstitch
for car seat, sofas, etc.

● Stitch length can be changed over among different lengths.

The sewing machine with a thread trimmer is provided as standard with a 2-pitch dial. One unit of this sewing machine is able to sew different sewing lengths since the sewing length can be instantaneously changed over.

● Reduction of noise and vibration.

Reduce weight by using resin parts for surface of vibration point. Noise and vibration decrease by changing the gear of an Hook into a bevel gear.

● High-torque direct-drive motor is installed.

The sewing machine provided with a thread trimmer has adopted a high-torque direct-drive motor which is suitable for heavy-weight materials. As a result, the sewing machine is excellent at its responsiveness and ensures increased penetration into the material even when sewing multi-layered parts.

* It does not contain without automatic thread trimmer.

● Power of penetration rose

- PLC-2760S (Large hook)
- PLC-2760NS (Large hook)
- PLC-2760NM (Small hook)

Post-bed, Unison-feed,
Lockstitch Machine with Vertical-axis Hook

The machine is the standard type without automatic thread trimmer, which is essential for topstitching processes.

PLC-2710

Functions for improving seam quality and workability.

Feed mechanism applied to different materials

Walking-foot/presser-foot alternating vertical movement mechanism prevents irregular stitches

The sewing machine has adopted a feed mechanism which keeps the ratio between the amount of the vertical movement of the walking foot and that of the presser foot constant even when the material is changed. The amount of the alternating vertical movement of the walking foot and the presser foot is 9 mm at the maximum. This amount can be set with ease by means of the large dial installed on the upper section of the sewing machine.

Higher lift of the presser bar

A presser bar height of 20 mm is achieved when using the automatic presser bar lifting lever. Thanks to this feature, the process of joining leather and heavy-weight sponges, which are usually used as materials for expensive sofas, can be carried out with ease.

Eccentricity of the feed driving cam is adjustable.

Adjustment of the eccentricity of the feed driving cam has been enabled. As a result, the sewing machine is able to perform sewing with the feed that is best-suited to the material and thread used. It is no longer necessary to prepare other subclass model sewing machines.

The upper and lower feed ratio is adjustable

The upper and lower feed ratio can be changed only by the adjustment of the lower feed amount without changing the upper feed amount, thereby preventing material slippage.

Excellent operability by the new mechanism

New mechanism of thread trimmer

Thread trimming can be stable even at the maximum 12mm sewing length.

Walking-foot/presser-foot alternating vertical movement mechanism prevents irregular stitches

The hook which can be adjusted with screw amount of needle guard contact to needle. The needle guard can be easily adjusted. Therefore, it prevents stitch skipping and wear of hook edge.

New lubrication system

Oil does not flow backwards by a valve system. Therefore, oil can be supplied certainly even low speed. Thanks to the stable lubrication to the hook, it produces beautiful seams.

Double tension provided as : standard

The machine is able to perform sewing with low-count thread under a higher tension, which is difficult for the conventional single-tension method, with ease. The machine comes with a dual-tension thread tension system.

Multi-functional 6-string switch (with automatic thread trimmer)

Single or Double can be set easy through Multi-functional 6-string switch, regarding the machine with trimmer. (Available for more thick material) In addition to the one-touch type reverse feed switch, a multi-functional 6-string switch is also provided. Changeover of the amount of the alternating vertical movement of the walking foot and the presser foot and changeover of the stitch length can be done simply with this one push.

New bobbin thread spool device

New bobbin thread spool device is no necessity of rolling thread manually.

Subclass

PLC-2760L (Large hook)

2-needle, Post-bed, Unison-feed, Lockstitch Machine with Vertical-axis Large Hook (Thick-thread type)

Thanks to the hook, thread-take up and gauges exclusively designed for PLC-2760L, the machine can sew with thread count up to #6. The machine is provided with the exclusive top and bottom feed locus ideal for sewing with thick-thread.

PLC-2760L

PLC-2765 (Large hook)

2-needle, Post-bed, Unison-feed, Lockstitch Machine with Vertical-axis Large Hook (Organized split needlebars type)

With its organized split needlebars, the machine produces well-balanced topstitch-seams even at the corners of materials such as sofas.
